(OXFO-) OXFORD GLYCOSCIENCES UK LTD. Rohlff C; Herath HMAC, Parekh RB, WPI; 2001-557937/62. Screening, diagnosis or prognosis of vascular dementia (VD), useful for determining stage of VD and monitoring the effect of VD therapy, comprises analyzing body fluid by 2-dimensional electrophoresis for features correlated with VD.

Claim 6; Page 39; 151pp; English.

The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance correlates with the presence, absence, stage or severity of VD or predicts the onset or course of VD, especially detecting in a sample of erebrospinal fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) (ABBSS6195) as fully defined in the specification. Detecting VD-associated features and VPI is useful for the screening, diagnosis or prognosis of VD, for determining the stage or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence represents a schizophrenia-associated protein isoform (SPI). These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebroopinal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a nucleic acid probe to detect the presence of nucleic acids or SPIs
                                                                                                            Schizophrenia-associated protein isoform; SPI; SPI-206; SPI-238; SPI-240; neuroleptic; gene therapy; cerebrospinal fluid; serum; plasma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                                                                                                                                                                                                                        The invention relates to methods and compositions for screening, diagnosis and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) Associated Features (SFB) and SCH Associated Protein Isoforms (SPB) in samples, e.g. by electrophoresis, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, studying the effectiveness of treatments and monitoring SCH, cherapeutic agents. The method is used for (1) screening or diagnosis of SCH and the relative abundance of at least 1 chosen feature correlates with the presence or absence of SCH, and (2) monitoring the effect of therapy administered to a subject with SCH and the relative abundance of at least 1 chosen feature which correlates with the severity of SCH. The expression and activity of the SFS, SPIS and related molecules (e.g. condary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as targets to identify and produce potential therapeutic agents for the treatment of SCH. The paucity of detectable neuralgic defects distinguishes neuropsychiatric disorders such as SCH from neurological disorders, where manifectations of antomical and biochemical changes have been identified in many cases. Consequently the identification and characterisation of cellular and/or molecular causative defects and neuropathies are necessary for improve treatment of neuropsychiatric disorders. Aduls114-AUL15762 represent the amino acid sequences of schizophrenia-associated isoforms used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                          Diagnosing and monitoring Schizophrenia by detecting the presence of Schizophrenia Associated Features and Schizophrenia Associated Protein Isoforms in samples of cerebrospinal fluid.

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated atth altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to abstrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acides encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins to express them are also useful for producing the proteins. The proteins of an untitional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation, as anti-inflammatory agents; and in treatment of leukaemias. AAD29510-AAD33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine, peptide therapy, stem cell growth factor, haematopoiesis, tissue growth factor, immunomodulatory, cancer, leukaemia, nervous system disorders, arthritis, inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                    Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                    ဌ
                                                                                                                                                                                                                               The invention relates to human polymucleotides (AA179941-AA193841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerleotides and polymerleotides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, haematopoiseis regulating activity, itssue growth factor activity, haematopoiseis regulating activity, and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this parent did not form part directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant; human serum albumin; HSA; yeast codon bias; host cell; overlapping oligonucleotide; expression vector.

The complete HSA gene (AAA10091) was generated as three synthetic fragments (AAA10092-AA10091) and yecombinant DNA technology. Each HSA fragment was synthesised from overlapping oligonucleotide fragments that were extended. This sequence represents the sequence of the HSA fragment HSA-III encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression
                                                                                                  The method relates to a method of recombinantly producing human serum albumin (HSA) in yeast by altering the coding sequence of HSA to comprise a yeast codon bias. The complete HSA gene (AAA10091) was generated as three synthetic fragments (AAA10092-A10094) joined by recombinant DNA technology. Each HSA fragment was synthesised from overlapping oligonuclecide fragments that were extended. This sequence represents the sequence of the HSA fragment HSA-II encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression the process for producing human serum albumin in the yeast host cells especially in secretory mode
Process for preparing recombined human serum albumin comprising yeast biased sex codons - uses a recombinant DNA technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Process for preparing recombined human serum albumin comprising yeast biased sex codons - uses a recombinant DNA technique.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias.

AAU39510-AAU393304 represent the amino acid sequences of novel human

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and calls genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used a survitional supplements. They may be used to increase stem cell proliferation; to requiate haematopoiesis; and in bone, cartiage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or etimulation; as anti-inflammatory agents; and in treatment of leukaemias. Secreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying at herapeutic agent expression to the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acide encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as untitional supplements. They may be used to increase stem cell proliferation; to requiate haematopoissis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation, as anti-inflammatory agents; and in treatment of leukaemias. They also also and an interatment of leukaemias. They are also descreted proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                              Human, vaccination, gene therapy, nutritional supplement,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to grothshine, cell proliferation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoldesis regulating activity, issue growth factor activity, immunomodulatory activity and activity, issue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                           Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins or useful in genetic vaccination, testing and therapy, and can be used as unitional supplements. They may be used to increase stem cell proliferation, to requiate haematopoissis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stillulation, as anti-inflammatory agents; and in treatment of leukaemias. AM129510-AAU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concatamer. The sequences are useful for treating an individual existence from or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatoid arthitis, asthma, sepsis, cirthosis, dermatitis, psorlaais, contact hypersenstivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, luque, uveitis and coeliac disease. The present sequence is a protein described in the exemplification of the

The invention describes a method of modulating an immune response in a mammal, comprising identifying a mammal that has or is at risk for having a bander disorder, and administering; (a) an isolated nucleic acid (NI) comprising an un-methylated CpG sequence to the mammal; (b) an isolated nucleic acid (NI) comprising sequence encoding alpha-MSH to the mammal; (c) a peptide that binds to a melanocortin receptor to the mammal; (n) an encoding alpha-MSH to the mammal; (n) a peptide that binds to a melanocortin receptor to the mammal; (n) control is useful for modulating immune response in a mammal having an amelioration of cone or more symptoms of the disorder. Preferably, the method is useful for modulating immune response in a mammal having bladder cancer (where administration of (NI) results in a modulation of the cystitis (where administration of (NI) results in a modulation of the improved immune response from Th2 response to a Th1 response). The method is also immune response from Inflammation which is associated with symptoms that is characterised by inflammation which is associated with symptoms of interstitial cystitis or associated with a disruption of the integrity of the bladder liming This is the amino acid sequence of human serum albumin residues 1-195 that can be used in the creation of melanocyte cumulating hormone (alpha-MSH) concertances resulting in secretion of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modulating immune responses in a mammal with a bladder disorder e.g.
bladder cancer, by administering nucleic acids comprising un-methylated
CpG sequences, nucleic acids encoding alpha-MSH, or alpha-MSH peptides to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant; human serum albumin; HSA; yeast codon bias; host cell;

Li S,

```
The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and calls genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation, to regulate haematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or etimulation, as anti-inflammatory agents; and in treatment of leukaemias. AMU29910-AAU33304 represent the amino acid sequences of novel human
                                                                                                                        Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alpha-mSH; inflammation; autoimmune disease; gene therapy; sepsis; alpha-melanocyte stimulating hormone; rheumatoid arthritis; asthma; cirrhosis; dermatitis; psoriasis; inflammatory bowel disease; immunosuppressive; antiinflammatory; antirheumatic; antiarthritic; antiathmatic; antibacterial; dermatological; antipsoriatic; antidiabetic; ophthalmological; neuroprotective; multiple sclerosis; diabetes; uveitis; coeliac disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The method relates to a method of recombinantly producing human serum albumin (HSA) in yeast by altering the coding sequence of HSA to comprise a yeast codon bias. The complete HSA gene (AAA10091) was generated as there synthetic fragments (AAA10092-A10094) joined by recombinant DNA oligonucleoide fragments (AAA10092-A10094) joined by recombinant DNA technology. Each HSA fragment was synthesised from overlapping the sequence of the HSA fragment HSA-I encoded by the human gene with a yeast codon bias. The invention also covers a recombinant expression the process for producing human serum albumin in the yeast host cell, especially in secretory mode
                                                                                                                                                                                                                                                                                                                                                                                                                                           Process for preparing recombined human serum albumin comprising yeast biased sex codons - uses a recombinant DNA technique.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; vaccination; gene therapy; nutritional supplement; stem cell proliferation; haematopoiesis; nerve tissue regeneration; immune stimulation; anti-inflammatory; leukaemia.

The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (NSH) concaramer. The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatoid arthritis, astima, sepsis, cirrhosis, dermattis, psoriasis, concact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveltis and coeliac disease. The present sequence is a protein described in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                   The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concatamer. The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatory arthritis, asthma, sepsis, cirrhosis, dermatitis, psoriasis, contact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coeliac disease. The present sequence is a peptide described in the exemplification of the

The method is useful for modulating immune response in a mammal having a

bladder disorder, where administration of (NI) results in an amelioration of one or more symptoms of the disorder. Preferably, the method is useful for modulating immune response in a mammal having bladder cancer (where or conducting immune response in a mammal having interstitial or for modulating immune response in a mammal having interstitial or systitis (where administration of (NI) results in a modulation of the immune response to a ThI response). The method is also useful for modulating immune response in a mammal having bladder disorder that is characterised by inflammation which is associated with symptoms of interstitial cystitis or associated with a disruption of the integrity of the bladder lining. This is the amino acid sequence of a human serum melanocyte stimulating hormone (alpha-MSH) concatamer useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concatamer. The sequences useful for treating an individual suffering from, or at risk of, a disorder of the immune system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concatamer. The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune syste e.g. inflammatory disorder or autoimmune disorder, including rheumatoid arthritis, asthma, sepsis, cirrhosis, dermatitis, psoriasis, contact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coeliac disease. The present sequence is a protein described in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concataent. The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatory arkhitis, asthma, sepsis, cirrhosis, dermattiis, psoriasis, contact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coeliac disease. The present sequence is a protein described in the exemplification of the

The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune syste e.g. inflammatory disorder or autoimmune disorder, including rheumatoid arthritis, asthma, sepsis, cirrhodis, dermatitis, psoriasis, contact hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coellac disease. The present sequence is a protein described in the exemplification of the

```
The present invention relates to a nucleic acid comprising a sequence encoding a fusion polypeptide having an alpha-melanocyte stimulating hormone (MSH) concatamer. The sequences are useful for treating an individual suffering from, or at risk of, a disorder of the immune system e.g. inflammatory disorder or autoimmune disorder, including rheumatoid hypersensitivity, inflammatory bowel disease, autoimmune encephalitis, multiple sclerosis, diabetes, lupus, uveitis and coeliac disease. The present sequence is a protein described in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid encoding fusion protein comprising alpha-melanocyte stimulating hormone concatamer or its analog, for treating inflammatory or autoimmune disorders.
                                                                                                     Alpha-MSH; inflammation; autoimmune disease; gene therapy; sepsis; alpha-melanocyte stimulating hormone; rheumatoid arthritis; asthma; cirrhosis; dermatitis; psoriasis; inflammatory bowel disease; immunosuppressive; antiinflammatory; antiheumatic; antiarthritic; antiasthmatic; antibacterial; dermatological; antipsoriatic; antidiabetic; ophthalmological; neuroprotective; multiple sclerosis; diabetes; uveitis; coeliac disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Yin P;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Sequence 445, Application US/09932613
Publication No. US20030091565A1
GENERAL INFORMATION:
APPLICANT: Human Genome Sciences, Inc.
APPLICANT: Beltzer, James P.
APPLICANT: Fleming, Tony J.
APPLICANT: Fleming, Tony J.
APPLICANT: Fleming, Tony J.
TITLE OF INVERTION: BINDING POLYPEPTIDES AND METHODS BASED THEREON FILE REFERENCE: Dyx-025.1 PCT; DXX-025.1 US
                                                                                                                                                                                                                              Sequence 2, Application US/09929552
Patent No. US20020123080A1
GENERAL INPORMATION:
APPLICANT: Sonnenschein, Carlos
TITLE OF INVENTION: Inhibiting Proliferation of Cancer Cells
NUMBER OF SEQUENCE: 2
CORRESPONDENCE ADDRESS:
STREET: 220 Montgomery Street, Suite 2200
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, Sequence 1, Sequence 2, Sequence 2, Sequence 3, Sequence 3, Sequence 4, Sequence 4, Sequence 4, Sequence 6, Sequen

US-10-153-064-133
Sequence 133, Application US/10153064
Patent No. 6663485
GENERAL INFORMATION:
APPLICANT: Bell at 1.
TITLE OF INVENTION: Chemokine Beta-1 Fusion Proteins
FILE REFERENCE: PF556
CURRENT PILING DATE: 2002-05-24
PRIOR FILING DATE: 2001-05-25
NUMBER OF SEQ ID NOS: 137
SOFTWARE: Patentin version 3.1
LENGTH: 651
SEQUENCE CHARACTERISTICS:

LENGTH: 610 amino acids
TYPE: amino acid
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
SEQUENCE DESCRIPTION: SEQ ID NO: 2:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  serum albumin precursor [validated] - bovine
serum albumin precursor [validated] - bovine
NyAlternate names: 67K protein; preproalbumin
C;Species: Bos primigenius taurus (catte)
C;Date: 24-Apr.1984 #sequence_revision 30-Sep-1993 #text_change 18-Aug-2000
C;Accession: A38885; A36401; A91258: B60808; S10780; D45800; A26693; A90309; A91458; A94
R;HGlowachuk, E.W.; Stoltenborg, J.K.; Reed, R.G.; Peters Jr., T.
submitted to the EMBL Data Library, August 1991
A;Description: Bovine serum albumin: cDNA sequence and expression.
A;Accession: A38885
A;Molecule type: mRNA
A;Resernce number: A38885
A;Molecule type: mRNA
A;Resernces: EMBL: M3215
